

## SUGGESTED PLANTS FOR CONTAINERS

Barbara J. Bromley, Mercer Co. Horticulturist 06 (rev)

The following are just some of the many possible container plants. Spring and summer bulbs; many dwarf, midget, and small vegetables, herbs, shrubs, trees (especially evergreens); bush fruit, fruit trees, and plants usually grown as houseplants can be used to beautify an outdoor planting. When selecting woody and herbaceous perennial plants to overwinter outdoors, select plants that are hardy at least two USDA hardiness zones north of your site. For example, Trenton is USDA hardiness zone 6. Perennial and woody plants for containers should be hardy to at least zone 4.
